

GROWTH CARTOGRAPHY

Become the Answer the Machine Cites

The Cartographers' Table · Session 1 · Aggregated

TONIGHT

You leave having built one **owned** answer object.

For a real client. That an AI assistant should cite.

Plus the method to repeat it.

LIVE

Ask the machine a real buyer's question.

Now watch which sources it decided to **trust**.

FACILITATOR: TYPE LIVE OVER THIS SLIDE

THE TERRAIN

The cost of making content just fell to zero.

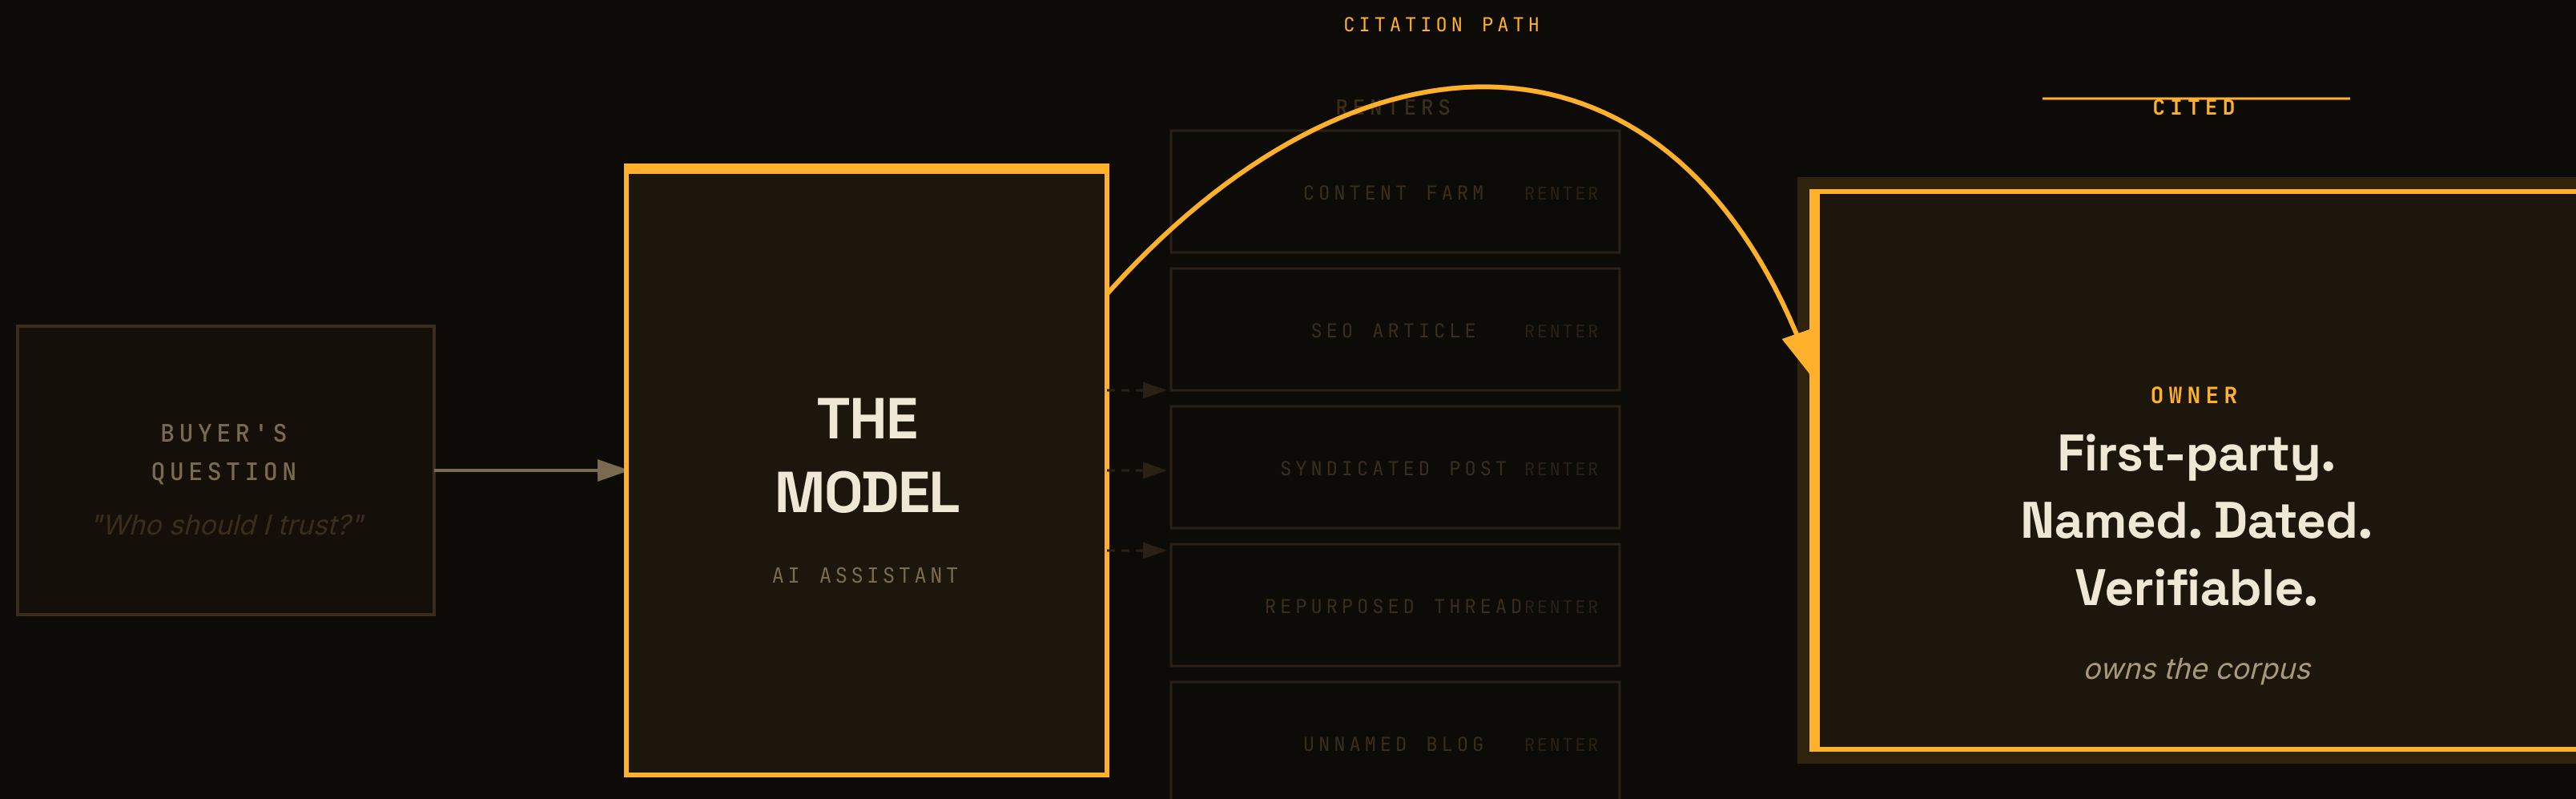

That is not the opportunity. That is the emergency.

If content is free to make, making it is worth nothing.

What stays scarce is provenance, trust, and the system that decides who gets seen.

AGGREGATED

The machine is the new front door.

You cannot negotiate reach with an aggregator. You can own a corpus it cites.

THE SHIFT

Being found is **rented**.
Being cited is **owned**.

RENTED

Ranking

A position you rent from an algorithm that changes weekly. No compounding. No provable asset.

OWNED

Citation

An answer a model trusts and cites. An asset you own and can prove. Compounding over time.

WHAT YOU WILL DO

Audit. Grade. Build.

Pick one high-intent question. Audit who the machine cites now.

Grade those sources. Build the owned answer object that deserves the citation.

BUILD • 55 MIN

Work a real client.

A Audit the question.

What does AI cite today? Run the buyer's question. List every source the model chose.

B Grade the sources.

Tier 1 owns it. Tier 2 corroborated. Tier 3 noise. Grade each citation honestly.

C Build the answer object.

Direct answer, proof, provenance, freshness. One piece that deserves to be cited.

GRADE IT

What should a machine **trust**?

TIER 1 **Own it.** First-party, named, dated, verifiable. You control the provenance.

TIER 2 **Corroborated.** Independent, evidence shown. Someone else can verify the claim.

TIER 3 **Noise.** Optimized to rank, not to be true. Avoid building on Tier 3.

SHOW YOUR WORK

Read me your one-sentence answer.

Then tell me who is winning the citation today,
and what tier they actually deserve.

THE CEILING

You did this once. Now it starts to **evaporate**.

Next week you re-audit from scratch. Nothing compounds.

Nothing is provable to a client. An agent cannot call it.

The recipe is not the moat.

BUILD THE MACHINE

SkillFoundry makes tonight repeatable and provable.

Source-authority grading as code. Every answer stamped with where it came from. Over an open interface an agent can query and trust. You own the system. You do not rent the outcome.

MCP: AN OPEN STANDARD FOR AGENT-READABLE KNOWLEDGE
INTERFACES

SKILLFOUNDRY

The owned system.

- Corpus graded by source authority
- Provenance stamped on every answer
- MCP endpoint an agent can call
- Yours. Not rented from a platform.

THE MAP CONTINUES

Next month: Decentralized.

Your answer object becomes the first node in an owned knowledge graph.
Check your inbox tonight for the worksheet, the Field Guide, and the free
prompt-pack.
